

THE POWER TO HEAL

The History of Medicine

In every person there's a will,
An inner strength, the power to heal.
But it is knowledge that reveals
The skills and tools to make it real.

Yet, there is so much to learn;
So many people in pain.
Where do we turn?

The Roman Galen made a start
Discovering organs, like the heart.
Then William Harvey took the lead:
As Father of Physiology.

Then began charts of veins and bones;
But, still, the germ remained unknown.
For what brought death there was no cure
Until the time of Louis Pasteur.

Pasteur brought vaccinations,
Sterilizations and cures,
Healing the world!

In every person there's a will,
An inner strength, the power to heal.
But it is knowledge that reveals
The skills and tools to make it real.
