

## TOUCH THE HEAVENS - Part 5 of THE HISTORY OF TRANSPORTATION MEDLEY

Just before the car made it big, another craze was at its height of popularity: the bicycle. Some of the most innovative bicycle makers were men like Orville and Wilbur Wright. They weren't content to merely travel down country lanes. They combined their bicycle know-how and the newest advancements in the internal combustion engine with an entirely new technology: Aerodynamics. Suddenly, the ancient dream of reaching the heavens seemed possible, after all...

Rising high before us,  
To the sky before us;  
Riding on air:  
Wings in chorus.  
Soar through the sky  
As our dreams come true  
Restore us!

Like a cloud  
'Bove the world  
Light as air  
Wings unfurled.  
Like a star  
In the night  
Dancing there  
Ever bright.

Like a cloud  
'Bove the world  
Light as air  
Wings unfurled.  
Like a star  
In the night  
Dancing there  
Ever bright.  
Rushing by

Like a bird  
Soaring proud  
High  
above the world.  
Rushing by  
Through the sky  
Soaring joyously.

Through the sky

New dreams are born, now that  
We have touched the heavens.

New boundaries drawn, as we  
Sail the new horizon.
